Languages	Front End Technologies	Back End Technologies	Database	Testing/Build/Deployment
Javascript, PHP	HTML, CSS, React, Redux, Sass, Material-UI, Bootstrap	Node.js, Express.js, REST API, Laravel	MySQL, MSSQL, MongoDB, Firebase	Jest, PHPUnit, Docker, DigitalOcean, AWS

PROFESSIONAL EXPERIENCE

GREENCOAST (GC OpCo, LLC)

October 2018 – Present

Software Developer

- Contribute towards **RESTful API** design and development of the company's business-facing application (**LAMP**).
- Contributed towards the migration of legacy **PHP** codebase to utilize **Laravel** and follow **MVC** architecture.
- Worked on building new and updating existing **React** components to improve user interface and user experience.
- Created an employee training application, handling database design (**MySQL**), creating API endpoints (**Node/Express**), user authentication, and UI component designs (**React/Redux**).
- Created the company's scheduling interface for retail staff leveraging **MERN** stack technologies.
- Worked with product managers and stakeholders to develop web-based business tools.
- Enforced high-quality client and server-side code that is unit-tested across the development lifecycle.
- Worked within an agile team to help prioritize and scope feature requests to ensure the biggest impact features were completed on schedule.

CYBERCODERS

March 2017 – April 2018

Technical Recruiter

- Generated over \$250,000 in revenue and was named top biller of the team in 2017 Q3.
- Specialized in recruiting Front-end and Back-end developers/engineers, and DevOps/SysAdmins .
- Worked directly with CTOs and engineering managers to understand technology stack and candidate requirements.
- Conducted several resume screenings and first-round phone interviews with candidates.

APPLICATIONS

UIFYMTRACKER.ME

Nutrition+Fitness Tracker Application

- Environment: **Node.js, Express, React, MongoDB, Docker**
- Created a REST API to establish client-server communication, allowing for CRUD operations to be performed against the database.
- Implemented user authentication and authorization middleware via **Passport.js** (**JWT** strategy).
- Implemented a search feature which consumes the Nutritionix API to provide users with nutritional information.
- Created React components using **Material-UI** keeping
- Tracked component state using **React hooks** and **Redux hooks** for state management.

GRADEBOOK CMS

Student Grade Portal

- Environment: **Node.js, Express, React, MongoDB**
- Created a RESTful API with protected routes by implementing middleware to enforce role-based access control.
- Implemented custom user authentication and authorization using json web tokens.
- Created data models for controllers to interact with the database and dynamically create, read, and update data.
- Created front end components using React and Redux for state management.
- Designed the user interface foundation with the **React-Bootstrap** library.

EDUCATION

UNIVERSITY OF CALIFORNIA, RIVERSIDE | Riverside, CA

Bachelor of Arts (B.A.)

LEARNINGFUZE CODING BOOTCAMP | Irvine, CA

12 Week Full Immersion Bootcamp
